

Emmanuel College Cambridge

11 MAY 2015

Students travelled by minibus to Emmanuel College where they explored the possibilities of Higher Education. The afternoon was spent at a Physics workshop at the Cavendish Laboratory. Here is what a couple of students had to say about the day.

The trip was an enlightening adventure through the world of physics. We found out so much, not only about the history of Physics, but also modern discoveries and the potential for the young of today to make the next big discovery. The site of the University and the surrounding area were truly something to be in awe of, the city itself was beautiful. Cavendish Laboratory taught us about the colour spectrum, and the relevance of Science in everyday life.

Joe Crabb

The Cambridge University trip was a great experience and an eye opener. It has inspired me to look in to further education. Also it has given me a better understanding of University and the practicality of going and getting a Degree. The trip has also shown me that Science is a core subject in most fields of work and is essential in everyday life. It has given me a further understanding in physics.
